

OUTDOOR LIGHTING

THE BOOK OF IN-LITE

in-lite®

Make your outdoor space unique

OUR PASSION IS

YOUR WORLD MAKING YOUR WORLD MORE BEAUTIFUL

With its trees, plants, colours and ambience, your garden is the most beautiful space in your home – until night falls and all the joy it brings simply disappears. Outdoor lighting from in-lite lets you discover how your garden can really come to life after dark.

Lighting makes your lovely garden a truly magical place. Your eye is drawn to the elements that are illuminated: an amazing tree, a wonderful lounging area or a colourful border. While everything blends together during the daytime, lighting lets you create personal accents and your own magical place after dark. We think everyone should experience this for themselves.

The in-lite mission is to show the world that the garden is the most beautiful part of the home and that lighting is essential to this space. We exclusively develop products for outdoor spaces where the focus is always on design, quality and simplicity. We produce attractive products that are made to withstand the elements of nature and are easy to connect and operate using the in-lite app.

This makes it possible for everyone and anyone to enjoy a garden with ambience and fully customised to their personal taste. Whether this involves coloured lighting or attractive warm white lighting, in-lite makes outdoor spaces exceptional..

NO LIFE

WITHOUT LIGHT

Once the sun sets, all colours in the garden gradually disappear along with the light. Stunning green trees and plants turn grey, steps are no longer easily visible and a sociable gathering in the garden comes quickly to an end. All perception and ambience fade away. Fortunately, there is always a way to make outdoor spaces exceptional.

WITH LIGHT

LOTS OF COLOUR

Once the lighting switches on, the garden is brought back to life – and more beautiful than ever. New contrasts, shadows and effects emerge that are not visible during the daytime. There's no need to put an end to the outdoor enjoyment, which can now continue into the late hours of the night. With in-lite, you can make your outdoor space exceptional!

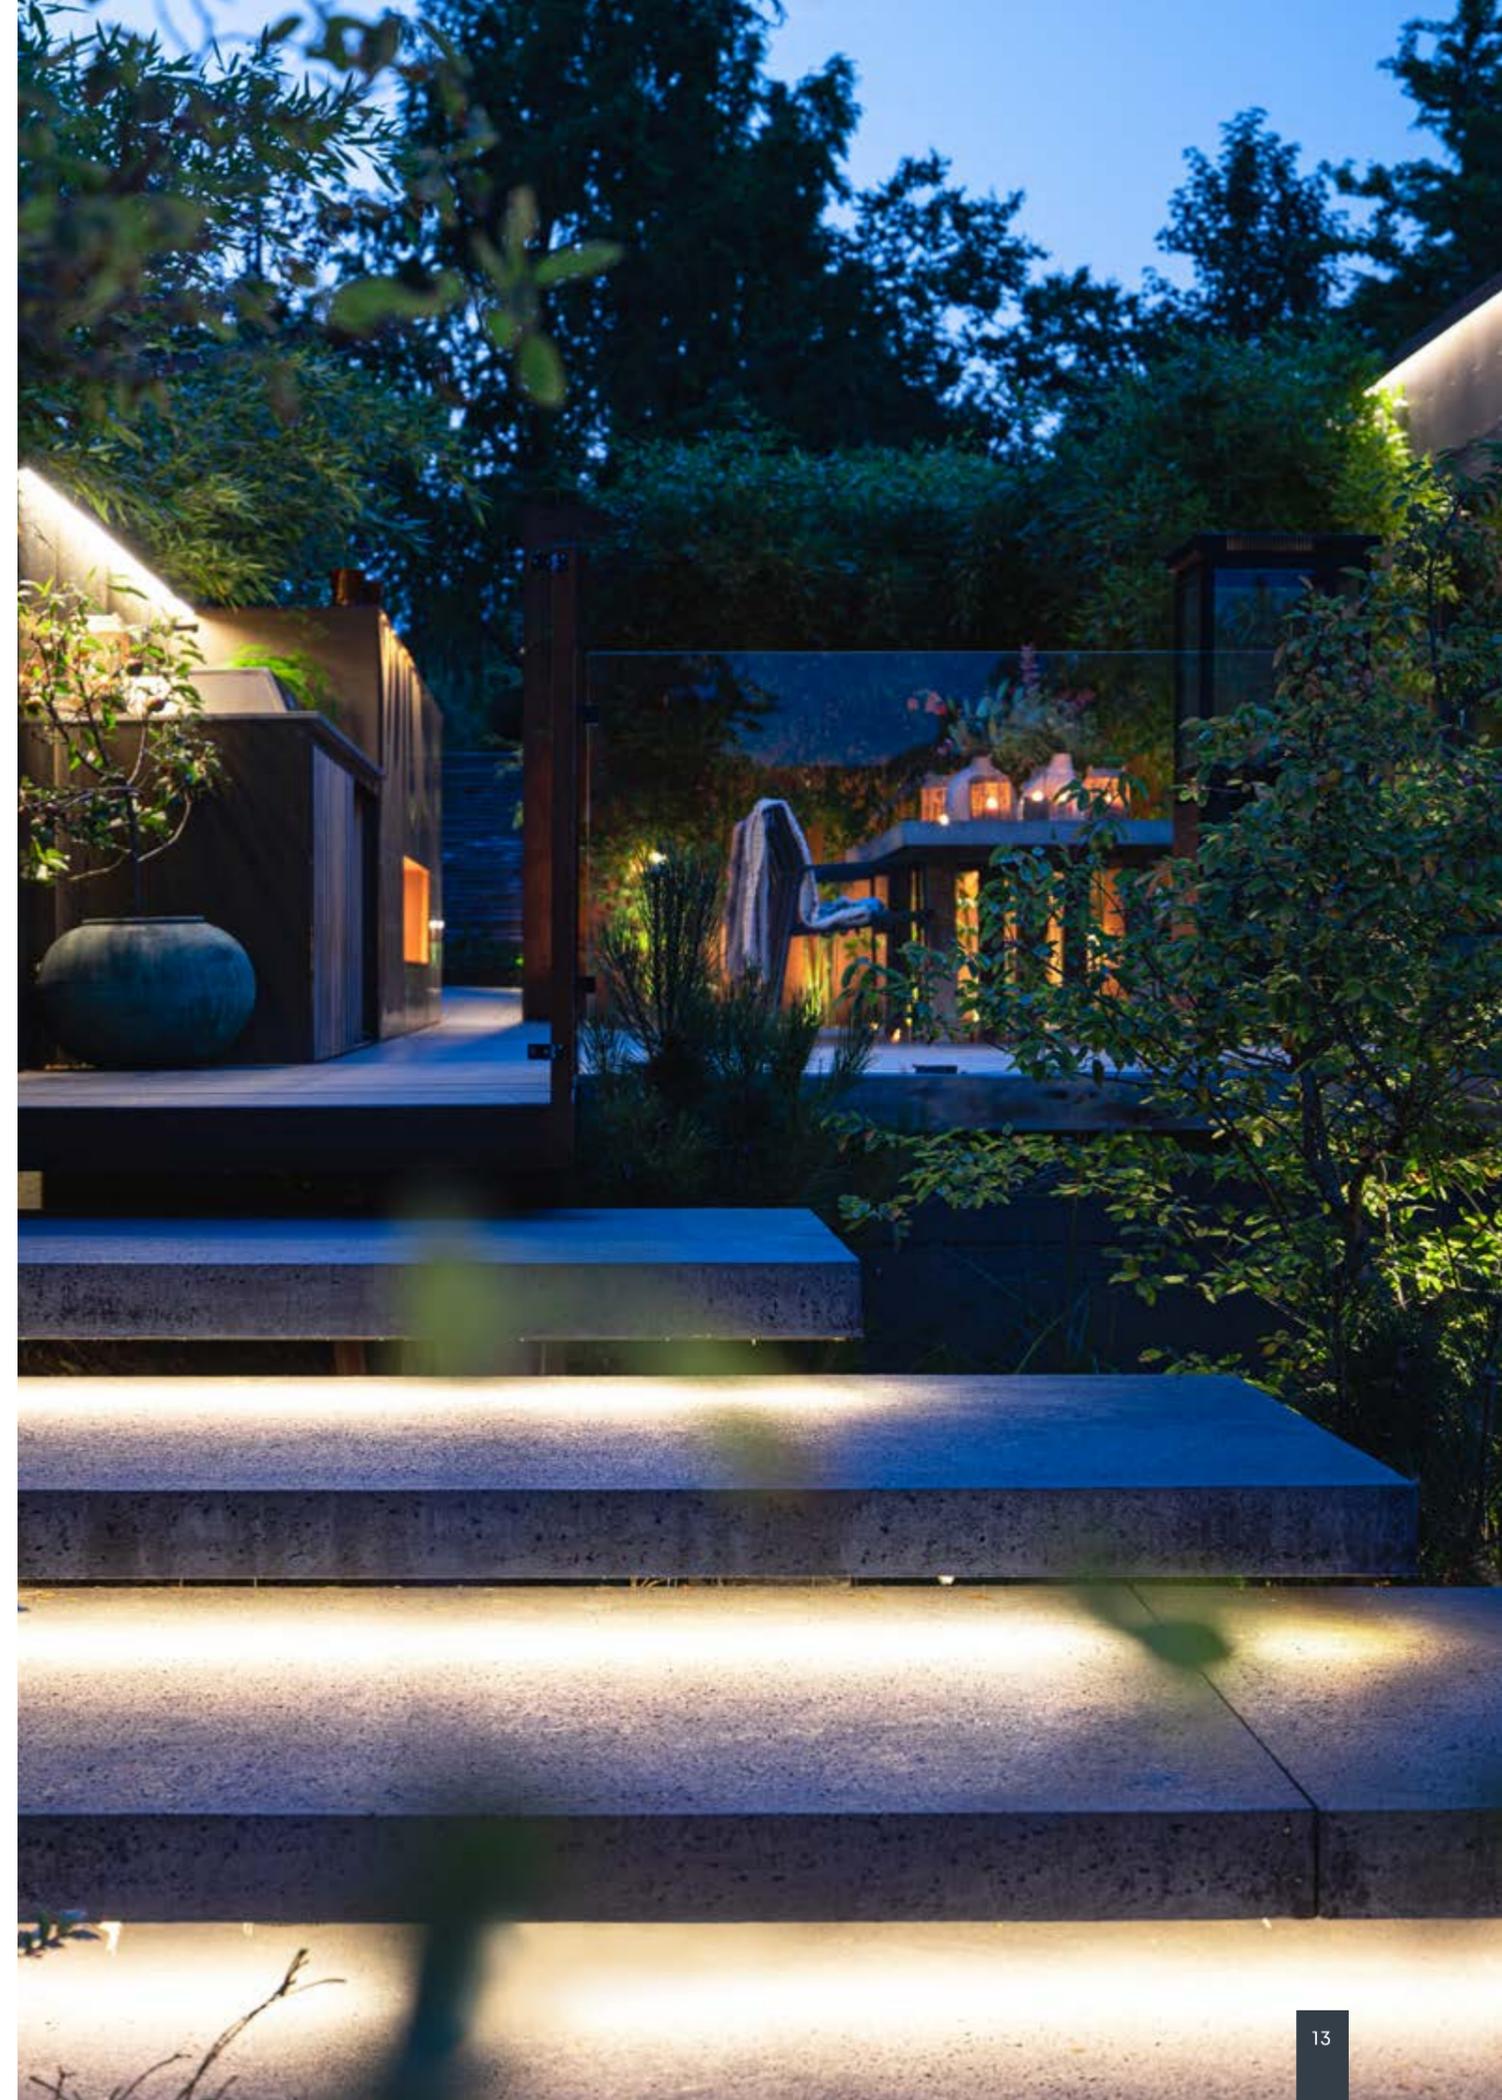

THIS IS HOW

WE PUT LIGHT TO WORK

in-lite outdoor lighting is based on low voltage. This means that the power from the socket is converted to a safe voltage by a transformer. This means that anyone can connect our lighting, there are only a few installation rules and the voltage is safe for people and animals. Plug-and-play at its best!

The in-lite ground cable can be easily installed in the transformer. Simply roll it out and lay it under a small layer of soil. You then connect this cable to your lights using the EASY-LOCK, a waterproof connector. You will have a beautifully illuminated garden in no time.

Love technology? Watch the videos on the in-lite website on installation and all of the available system parts.

To make your garden even more magical, in-lite TONE is the perfect choice. The TONE fixtures can be operated separately using the in-lite app. You can change the colour of the lighting and dim it, giving you even greater control and offering virtually endless possibilities.

INNOVATION

VISION ON LIGHT

At in-lite, we design all of our own products and are closely involved in the production process. As a result, we gladly offer a five-year guarantee on our entire range.

We only develop products for outdoor spaces and know what it takes to create ambience with light. Not surprisingly, the design process is inspired by nature, though also international trends and architectural styles. This lets us create a product range with a solution for every taste.

WARM WHITE LIGHT IS NATURAL LIGHT

Sustainability is an important focus at in-lite. That is why we work with only the highest quality LEDs from the most reputable brands. This makes our lights extremely sustainable: they use a minimum of energy and are very long lasting. in-lite develops the perfect light for outdoor spaces, so that all of the colours of a garden remain as natural as possible and spectacular contrasts are created.

LAB LAB LAB

LAB FAVOURITE

ONE WITH NATURE

The in-lite LAB is the 'special projects' division within in-lite. The LAB team works daily to create attractive lighting plans for the most beautiful outdoor spaces. These vary from private gardens (both big and small) to the semi-public areas of hotels and restaurants. The plans are developed in 3D and photorealistic renders during an early stage show the lighting effects that can be expected.

Get inspired by all the possibilities and if you are interested in a creative lighting plan, the in-lite LAB team is here to make it happen.

LOOKING TOWARDS TOMORROW

BEYOND LIGHT

At the in-lite LAB, we have a mission: we want in-lite to develop the perfect light for outdoor spaces, so that all the colours of a garden remain as natural as possible and spectacular contrasts are created, and to show that in-lite lighting is the best solution for any outdoor space. By now, we have created countless lighting plans and are familiar with all the possibilities. We consider sight lines, interesting elements in the garden and how you and your guests use the outdoor space. These factors are used to develop the perfect lighting plan.

Our goal is to amaze you with what light can do for your outdoor space. Note: If you are interested in a LAB lighting plan, do not expect a standard plan, but for your expectations to be exceeded!

UNIQUE FEATURES

HUMAN DIMMING

At in-lite, we use technology to give you the ultimate in user-friendliness. This is clearly reflected in, for example, the products that offer Human Dimming. This technology lets you dim the lighting with a simple hand movement. The SWAY TABLE, DISC PENDANT and various other products are now equipped with this technology.

Of course, this is not the only technology that we have developed. We also have fixtures with Motion and Smart features. Curious about all the possibilities? Have a look at our website for more information.

SWAY TABLE

MIX & MATCH

FUNDA MENTALS

A good lighting plan consists of a combination of in-lite fundamentals and an in-lite concept. Fundamentals are products that can be used in any garden, such as outdoor spotlights, ground lights and surface lights. These are used to illuminate trees, wall elements and other large objects. The fixtures blend into the background during the daytime, but make an impressive difference after dark.

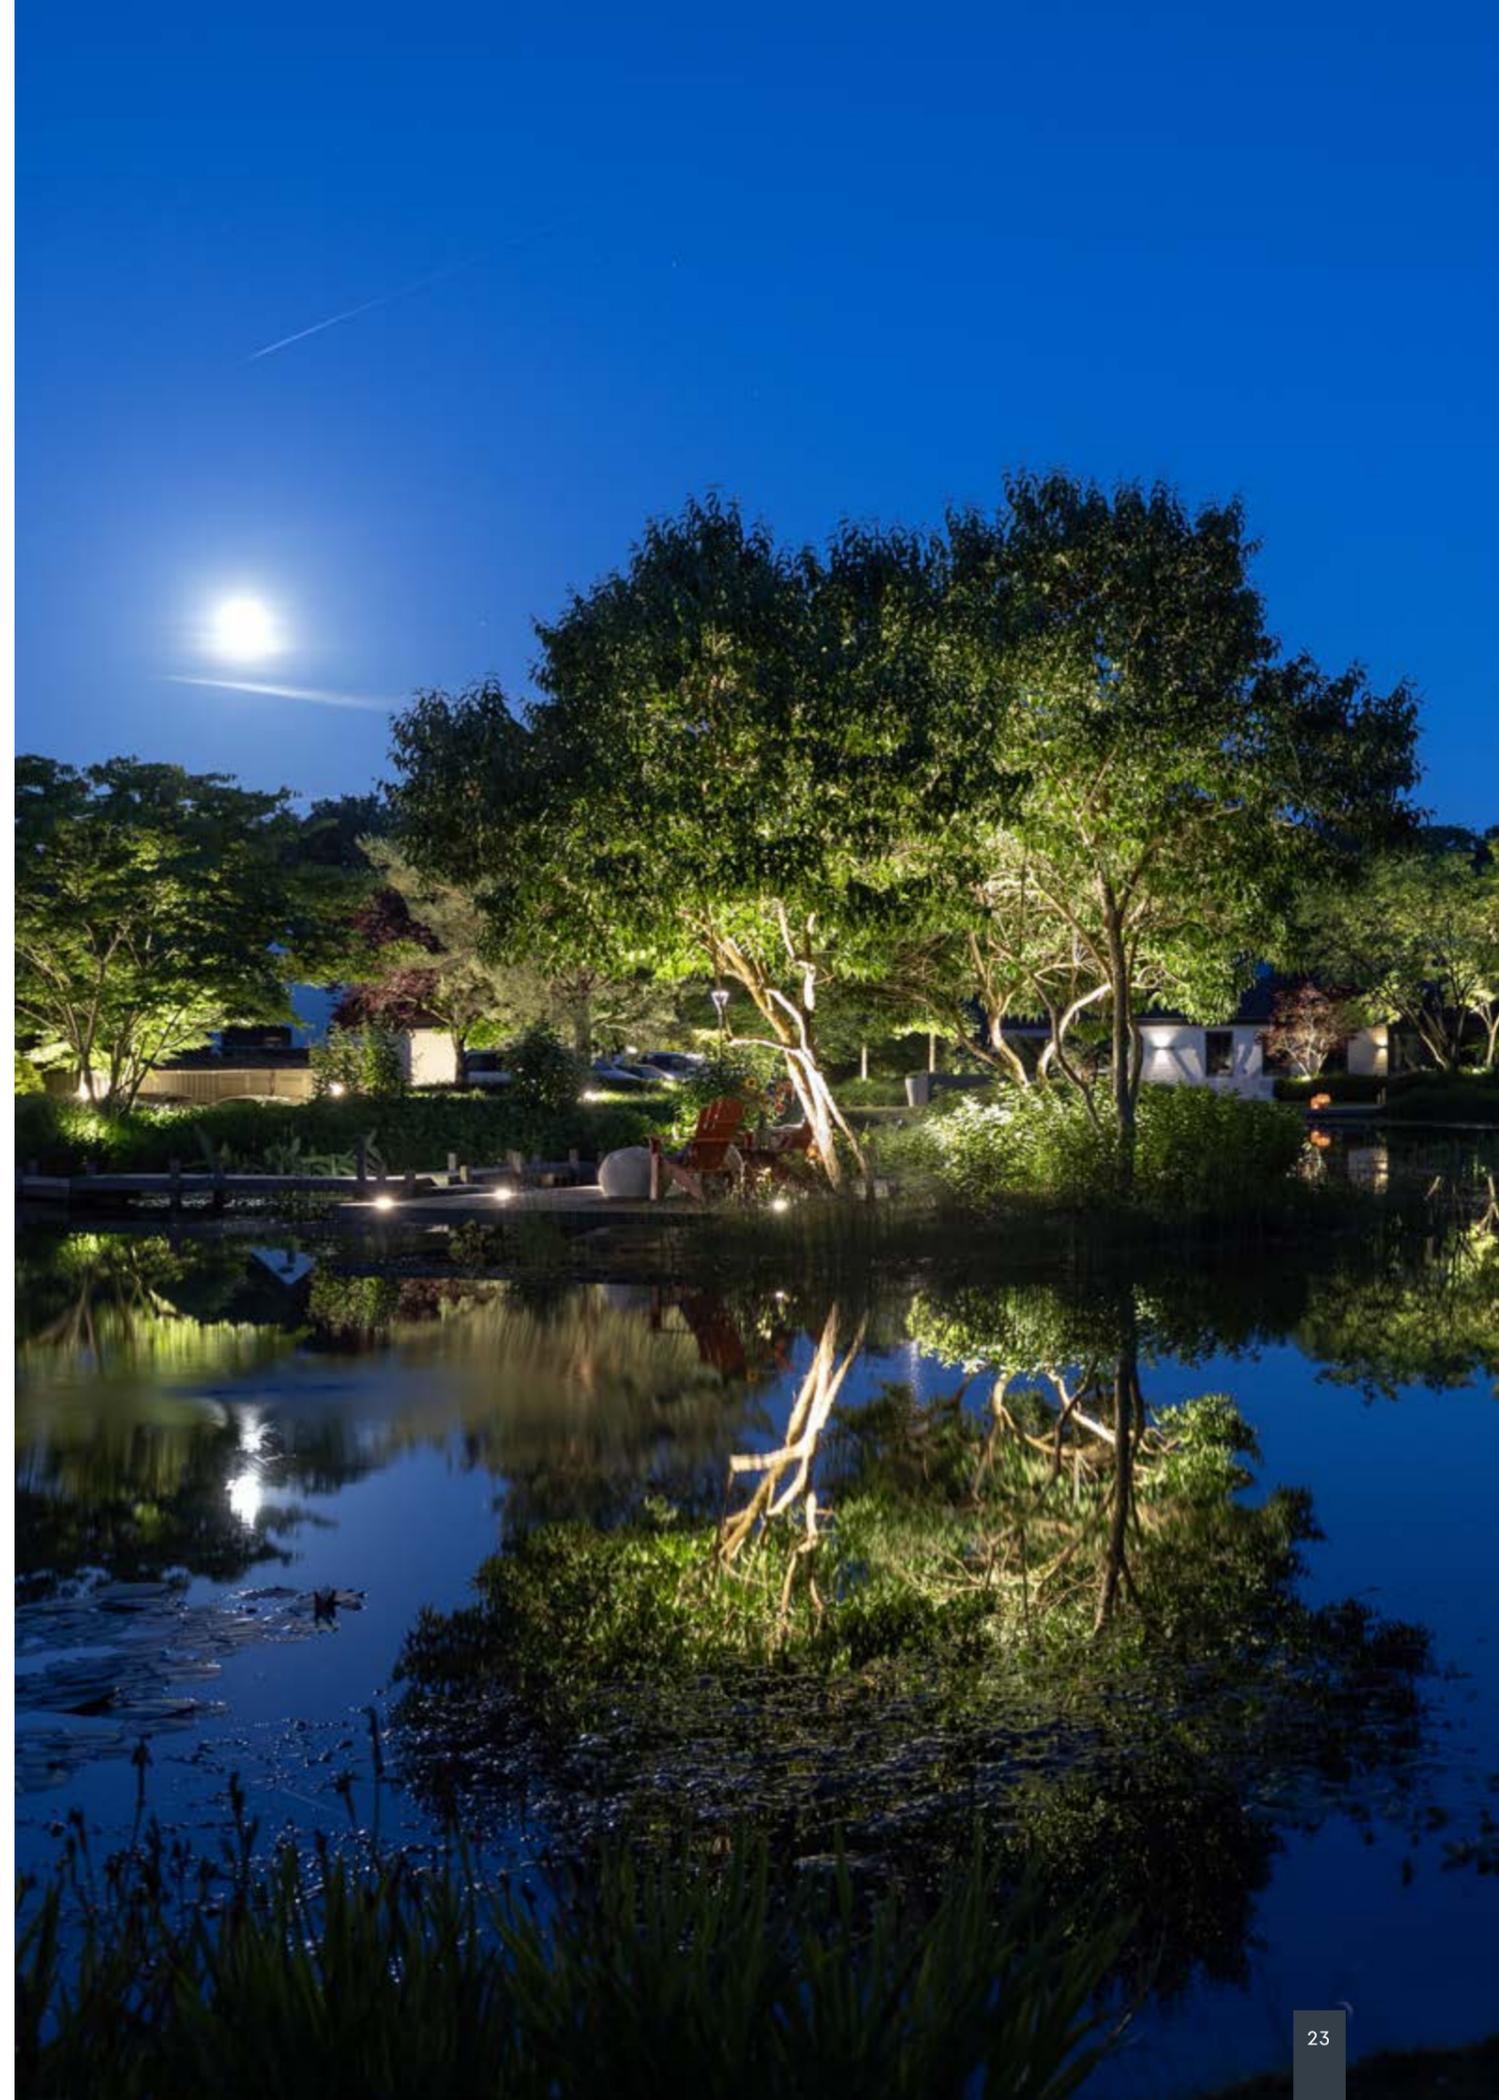

“USABLE ANYWHERE
FOR THE PERFECT
OUTDOOR AMBIENCE”

in-lite concepts are products with a distinctive design that together form a group and combine perfectly in any garden. They have the same design, but each serves a different purpose. All so the lighting in your garden shares a single style as a result. Examples of concepts are the SWAY, ACE, EVO and DISC.

SCOPE

NERO

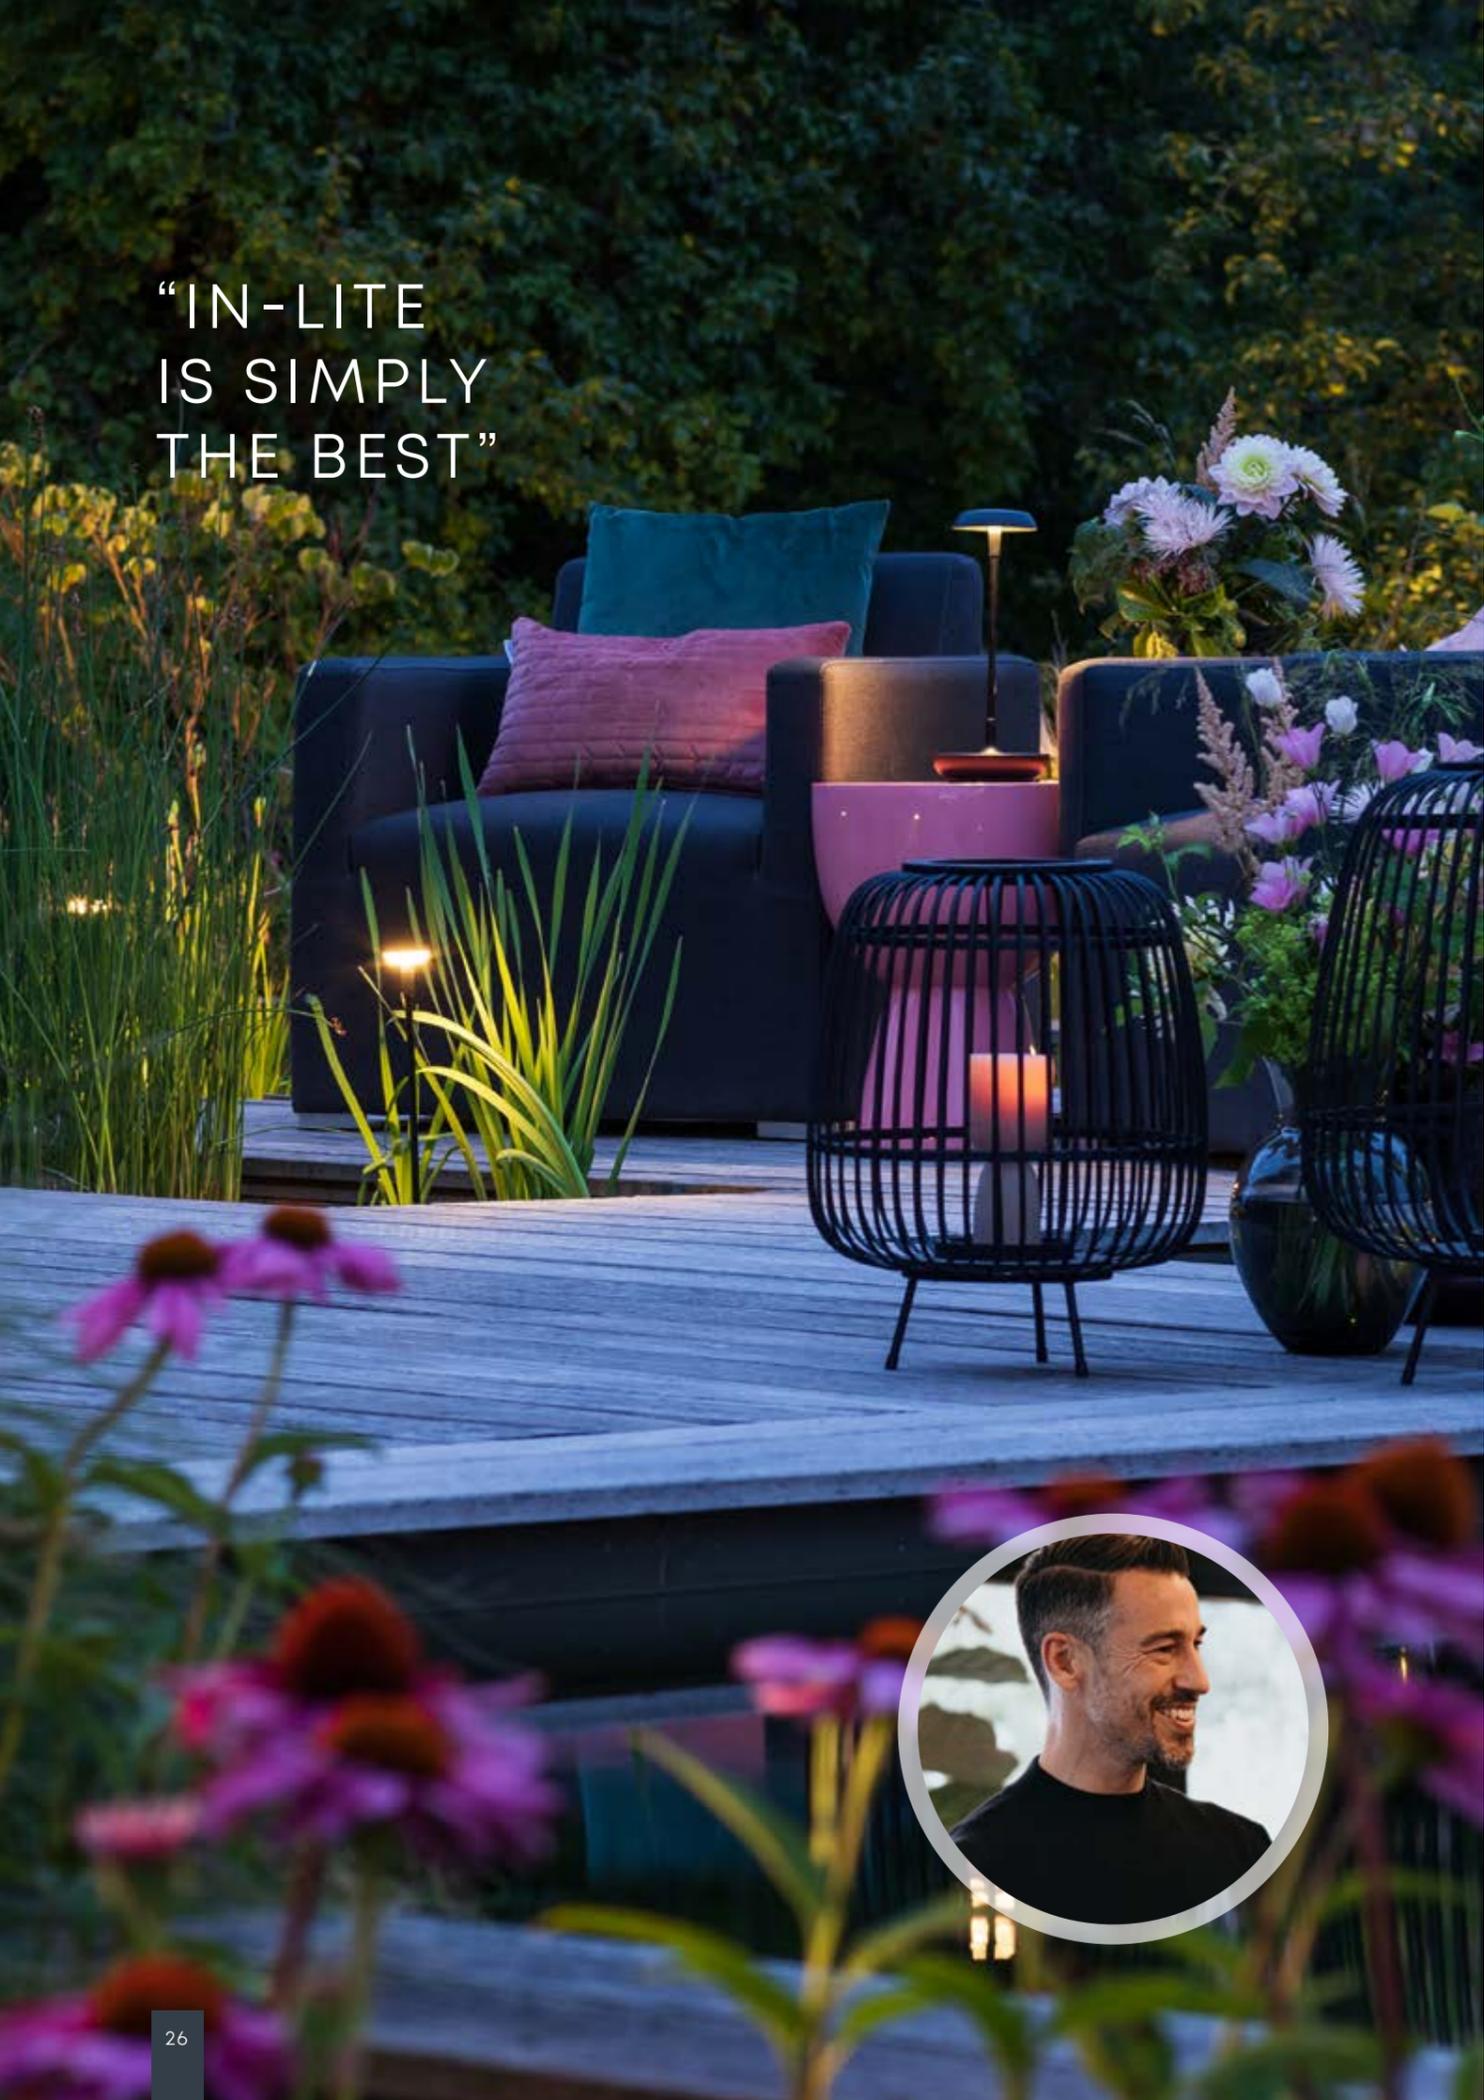

YOUR GARDEN, YOUR MOMENT

Ambience and functionality go hand in hand. Outdoor lighting creates a unique atmosphere, but also serves a purpose, namely to meet your specific needs. After dark, you want to still be able to enjoy the colours of the flowers and plants in your garden, as well as have well-lit paths and steps. Sometimes you want subtle light, other times you prefer it a bit brighter. Your garden. Your choice. Your moment.

“IN-LITE
IS SIMPLY
THE BEST”

FAVORITE

DAVIT ARICAN

IN PERFECT HARMONY

German landscape architect Davit Arican has made many a dream garden a reality. He likes to incorporate a lot of greenery into his gardens and carefully considers the best locations for different elements like patios and ponds. “What is most important is that the customer feels safe and at home in his or her outdoor space.” Davit believes that lighting absolutely contributes to this.

In recent years, Davit Arican has incorporated in-lite lighting into many outdoor spaces. And for good reason. “in-lite makes it fun to install lighting! The system is plug & play, so my entire team can install it. Plus, you can easily add extra lighting to the garden later on. It doesn’t get any easier than that!”

“SWAY MAKES
ME SMILE”

SWAY

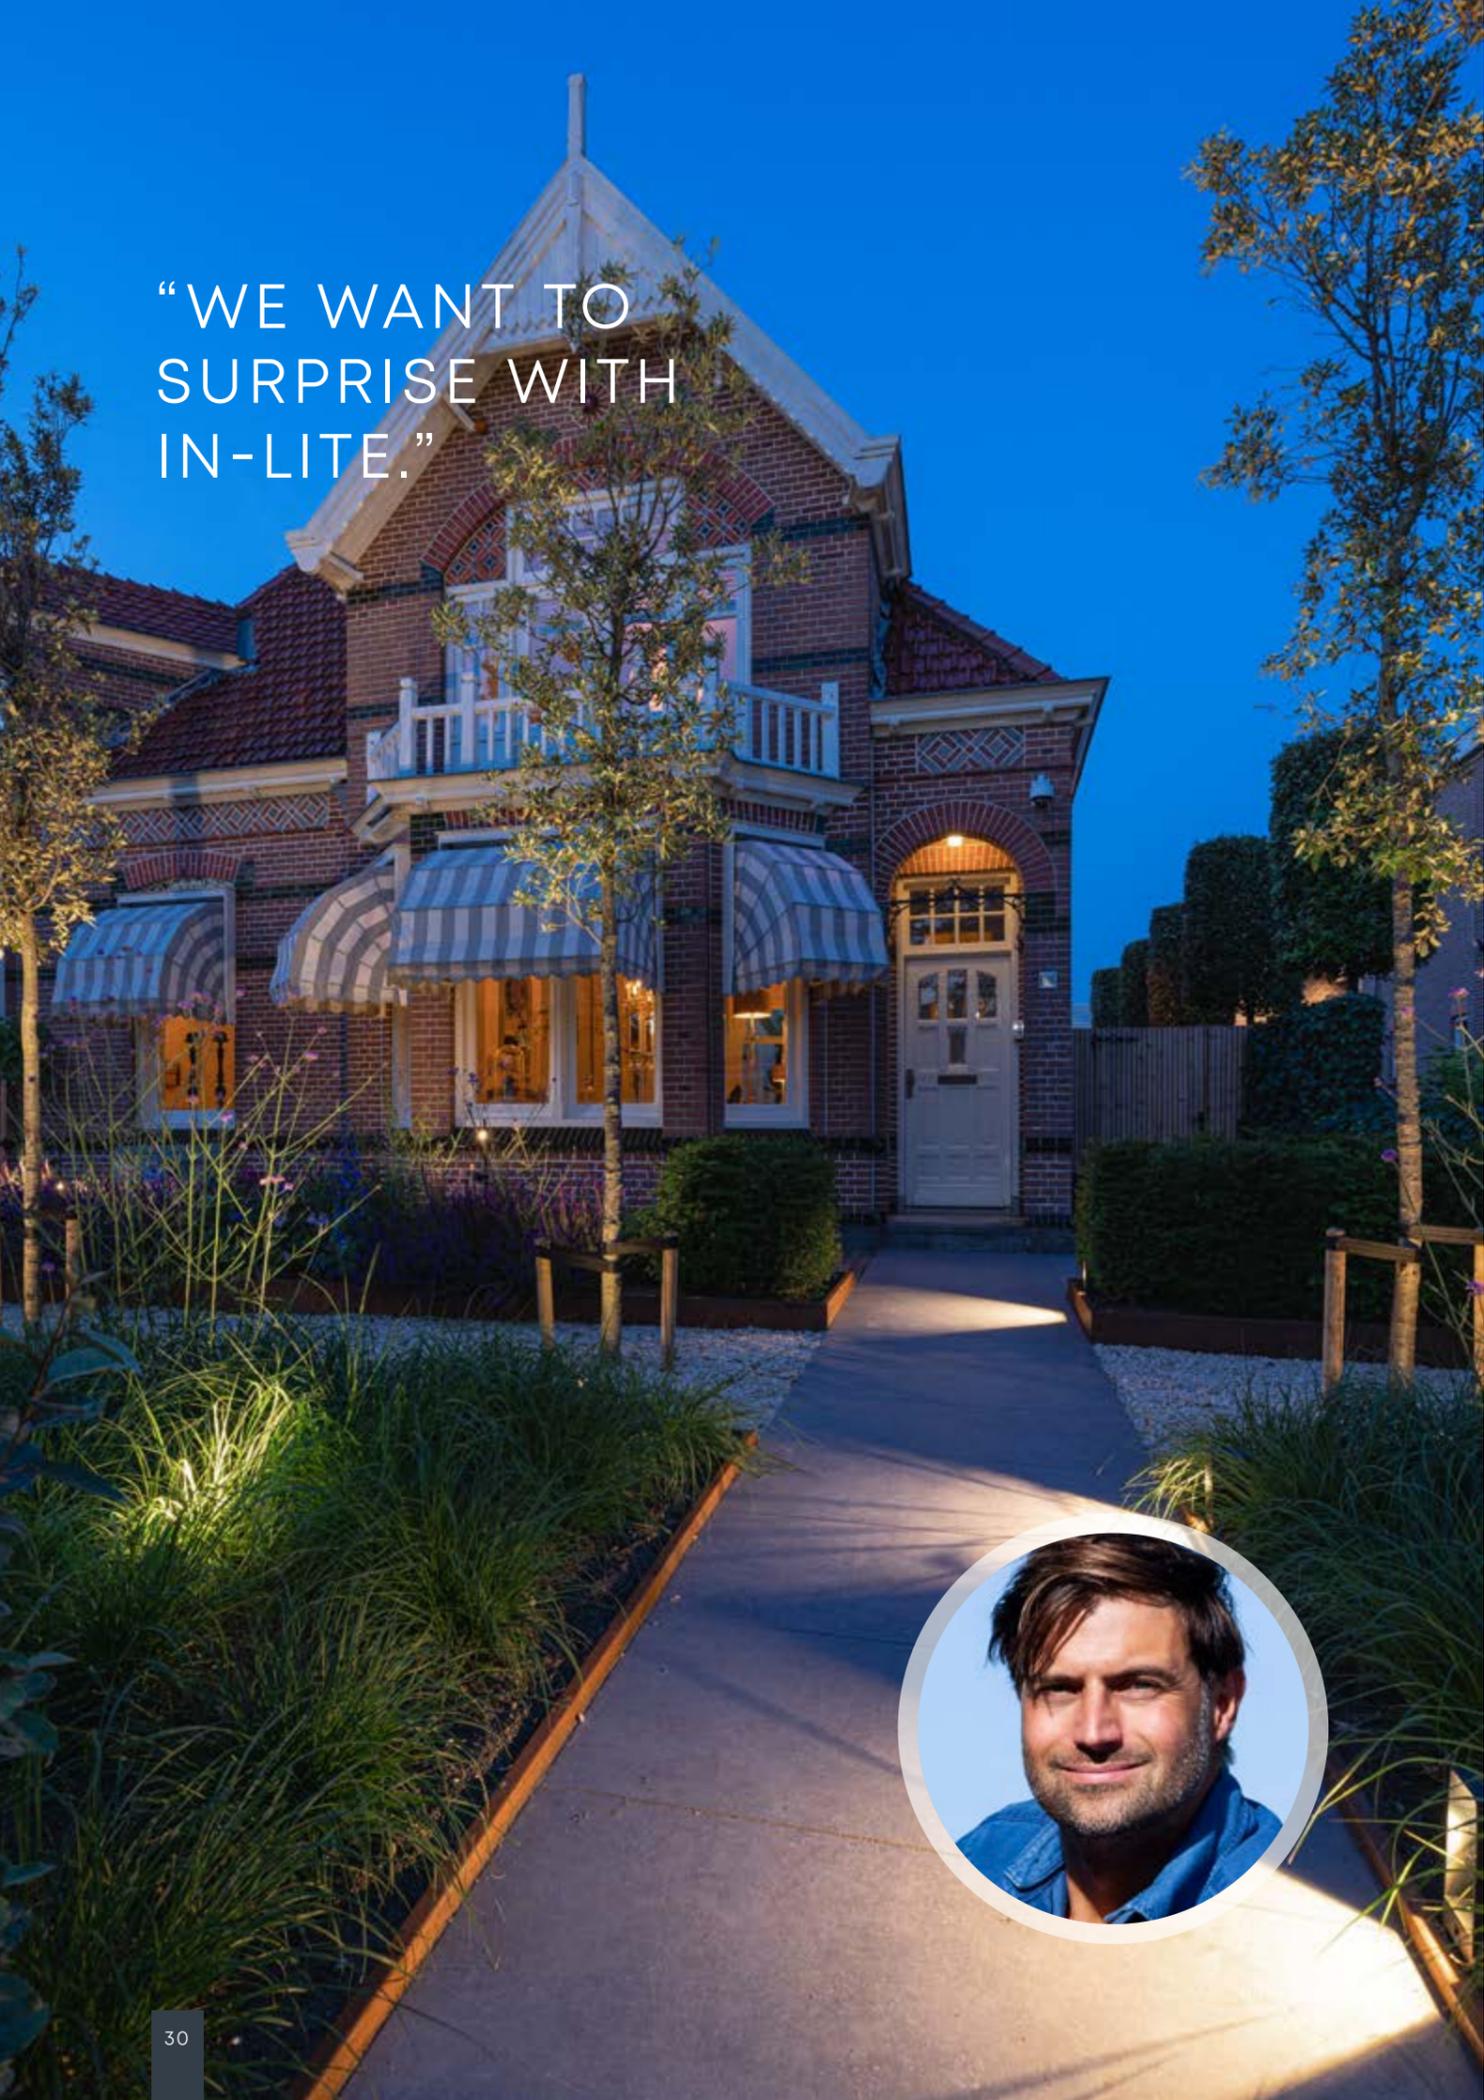

**MINI
SWAY**

Davit and his team work with a large percentage of the in-lite product range, but naturally, he also has his favourite fixtures. “The concept I like using most is the SWAY. In my opinion, it gives off a nice warm, white light and creates a beautiful shadow play. It’s perfect for using among border plants. The SWAY makes me smile!”

Another concept we use often is the DISC. It’s a more eye-catching fixture and very popular with our customers.

“WE WANT TO SURPRISE WITH IN-LITE.”

FAVOR

BART BIESOT

IN-LITE MAKES IT EASY

“Going the extra mile, personal contact and flexibility are the most important factors of our work.” Biesot is well known for this. This family business from Vijfhuizen has been designing and maintaining gardens with a ‘wow factor’ for companies and private individuals for over 70 years. “We don’t go for simple. Or boring. We surprise!” says owner Bart Biesot.

User-friendliness is one of the most important features of in-lite, explains Bart. “At Biesot, we design all of our own lighting plans. And in-lite makes this process a lot easier because we can install the systems ourselves without having to use an electrician.”

ACE HIGH

ACE

ACE

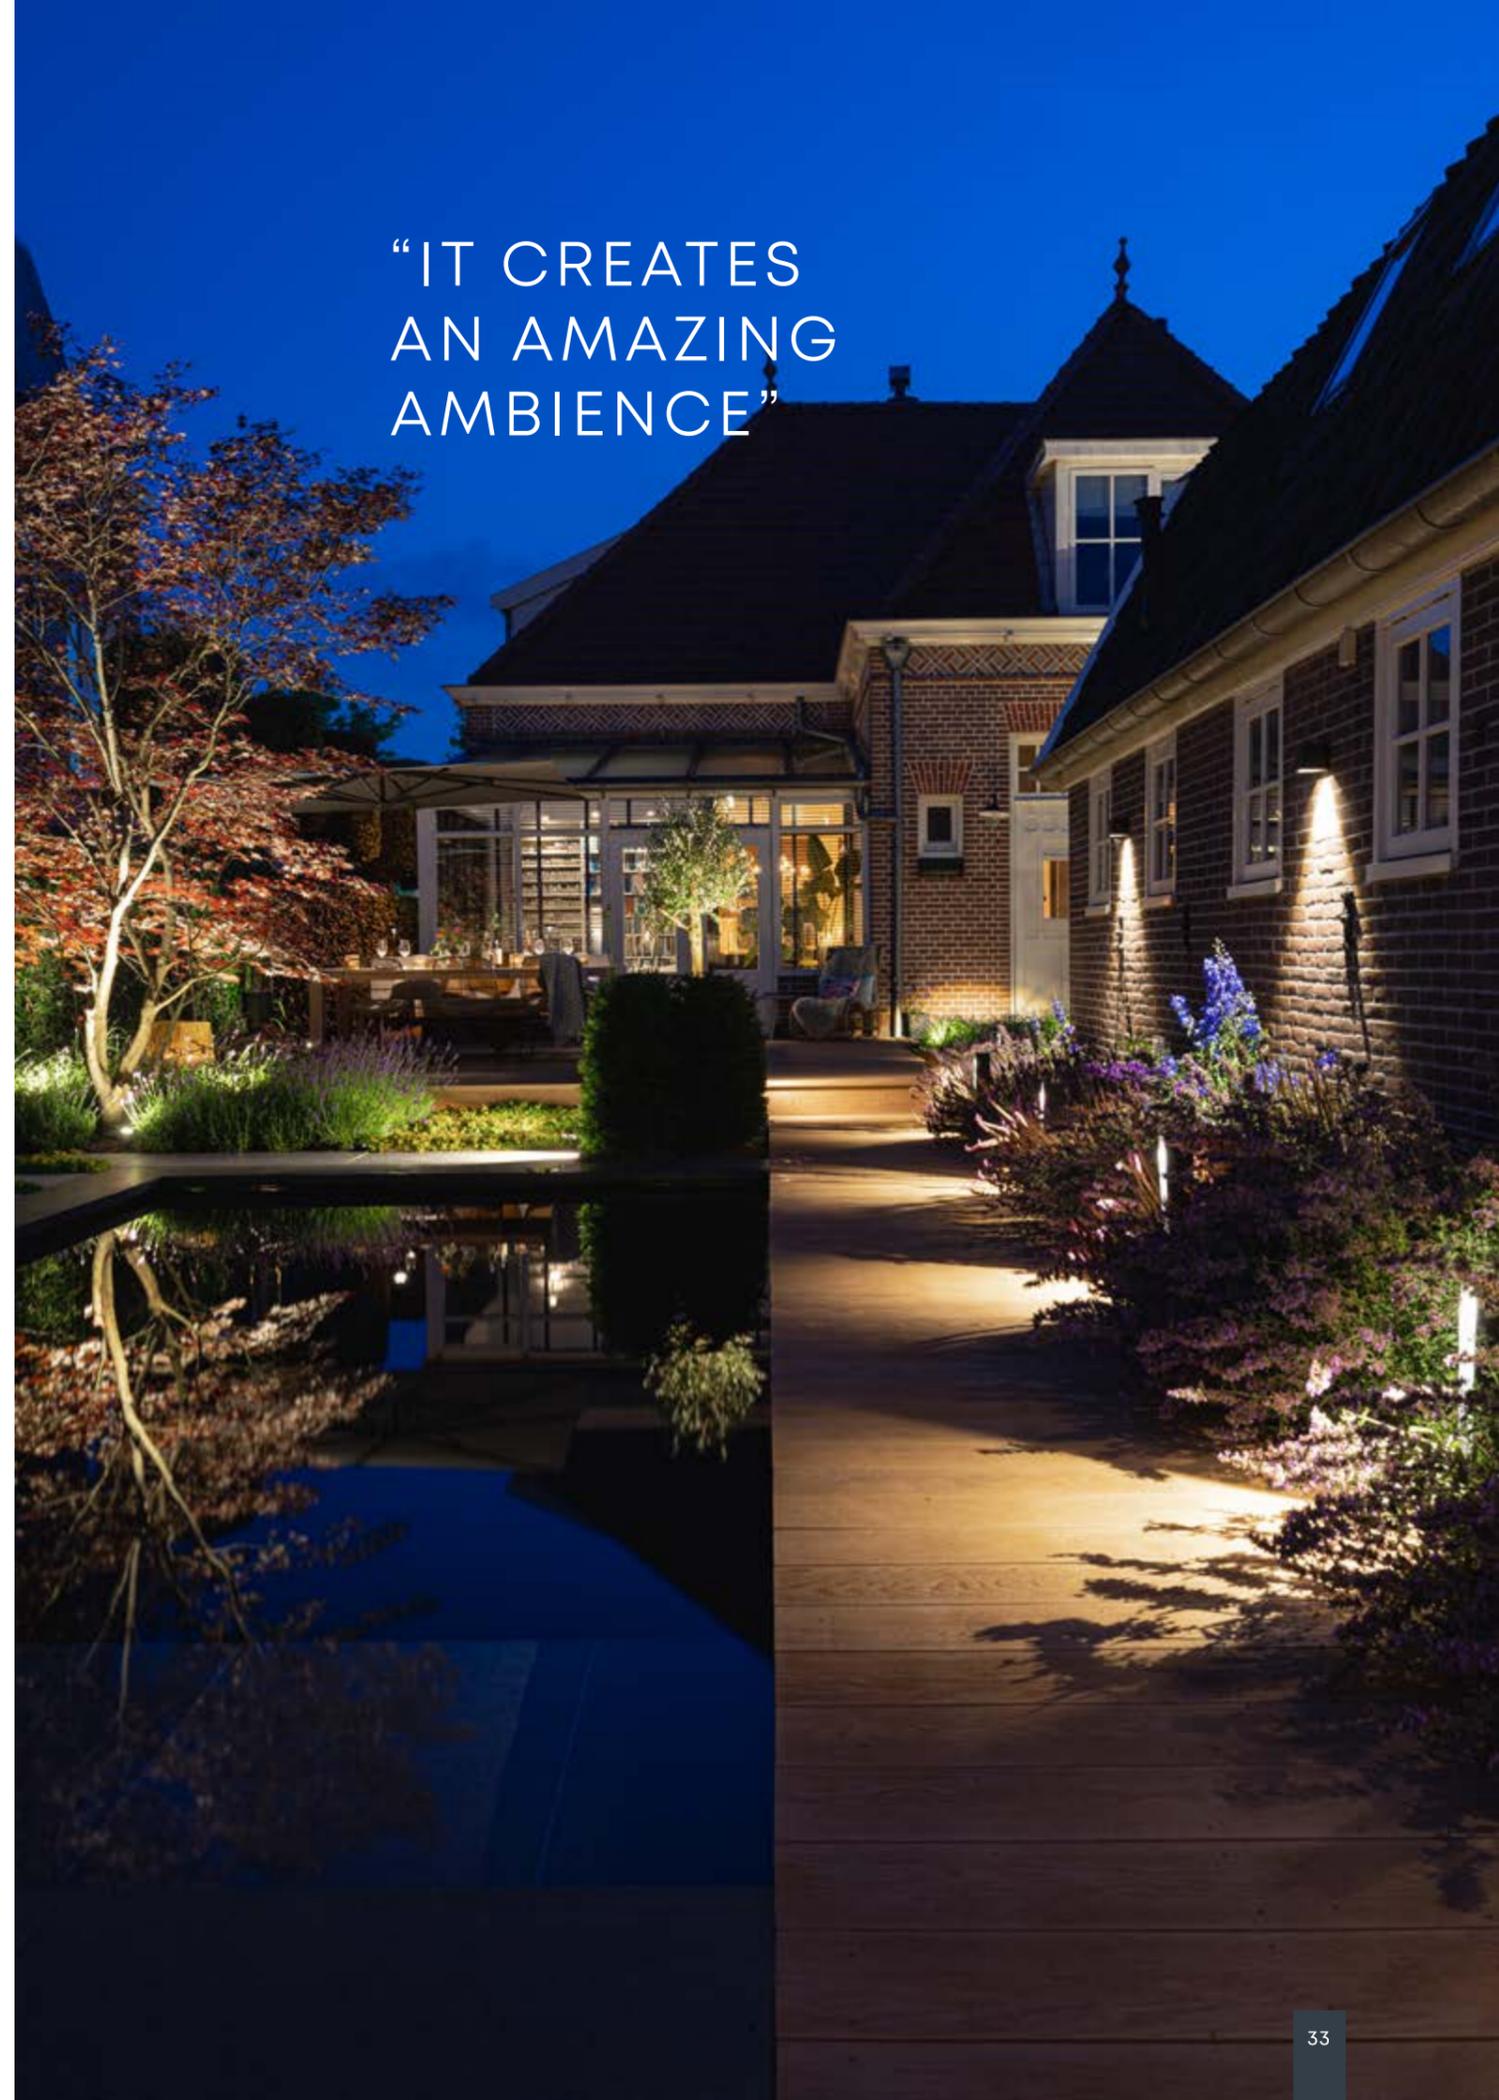

ACE DOWN

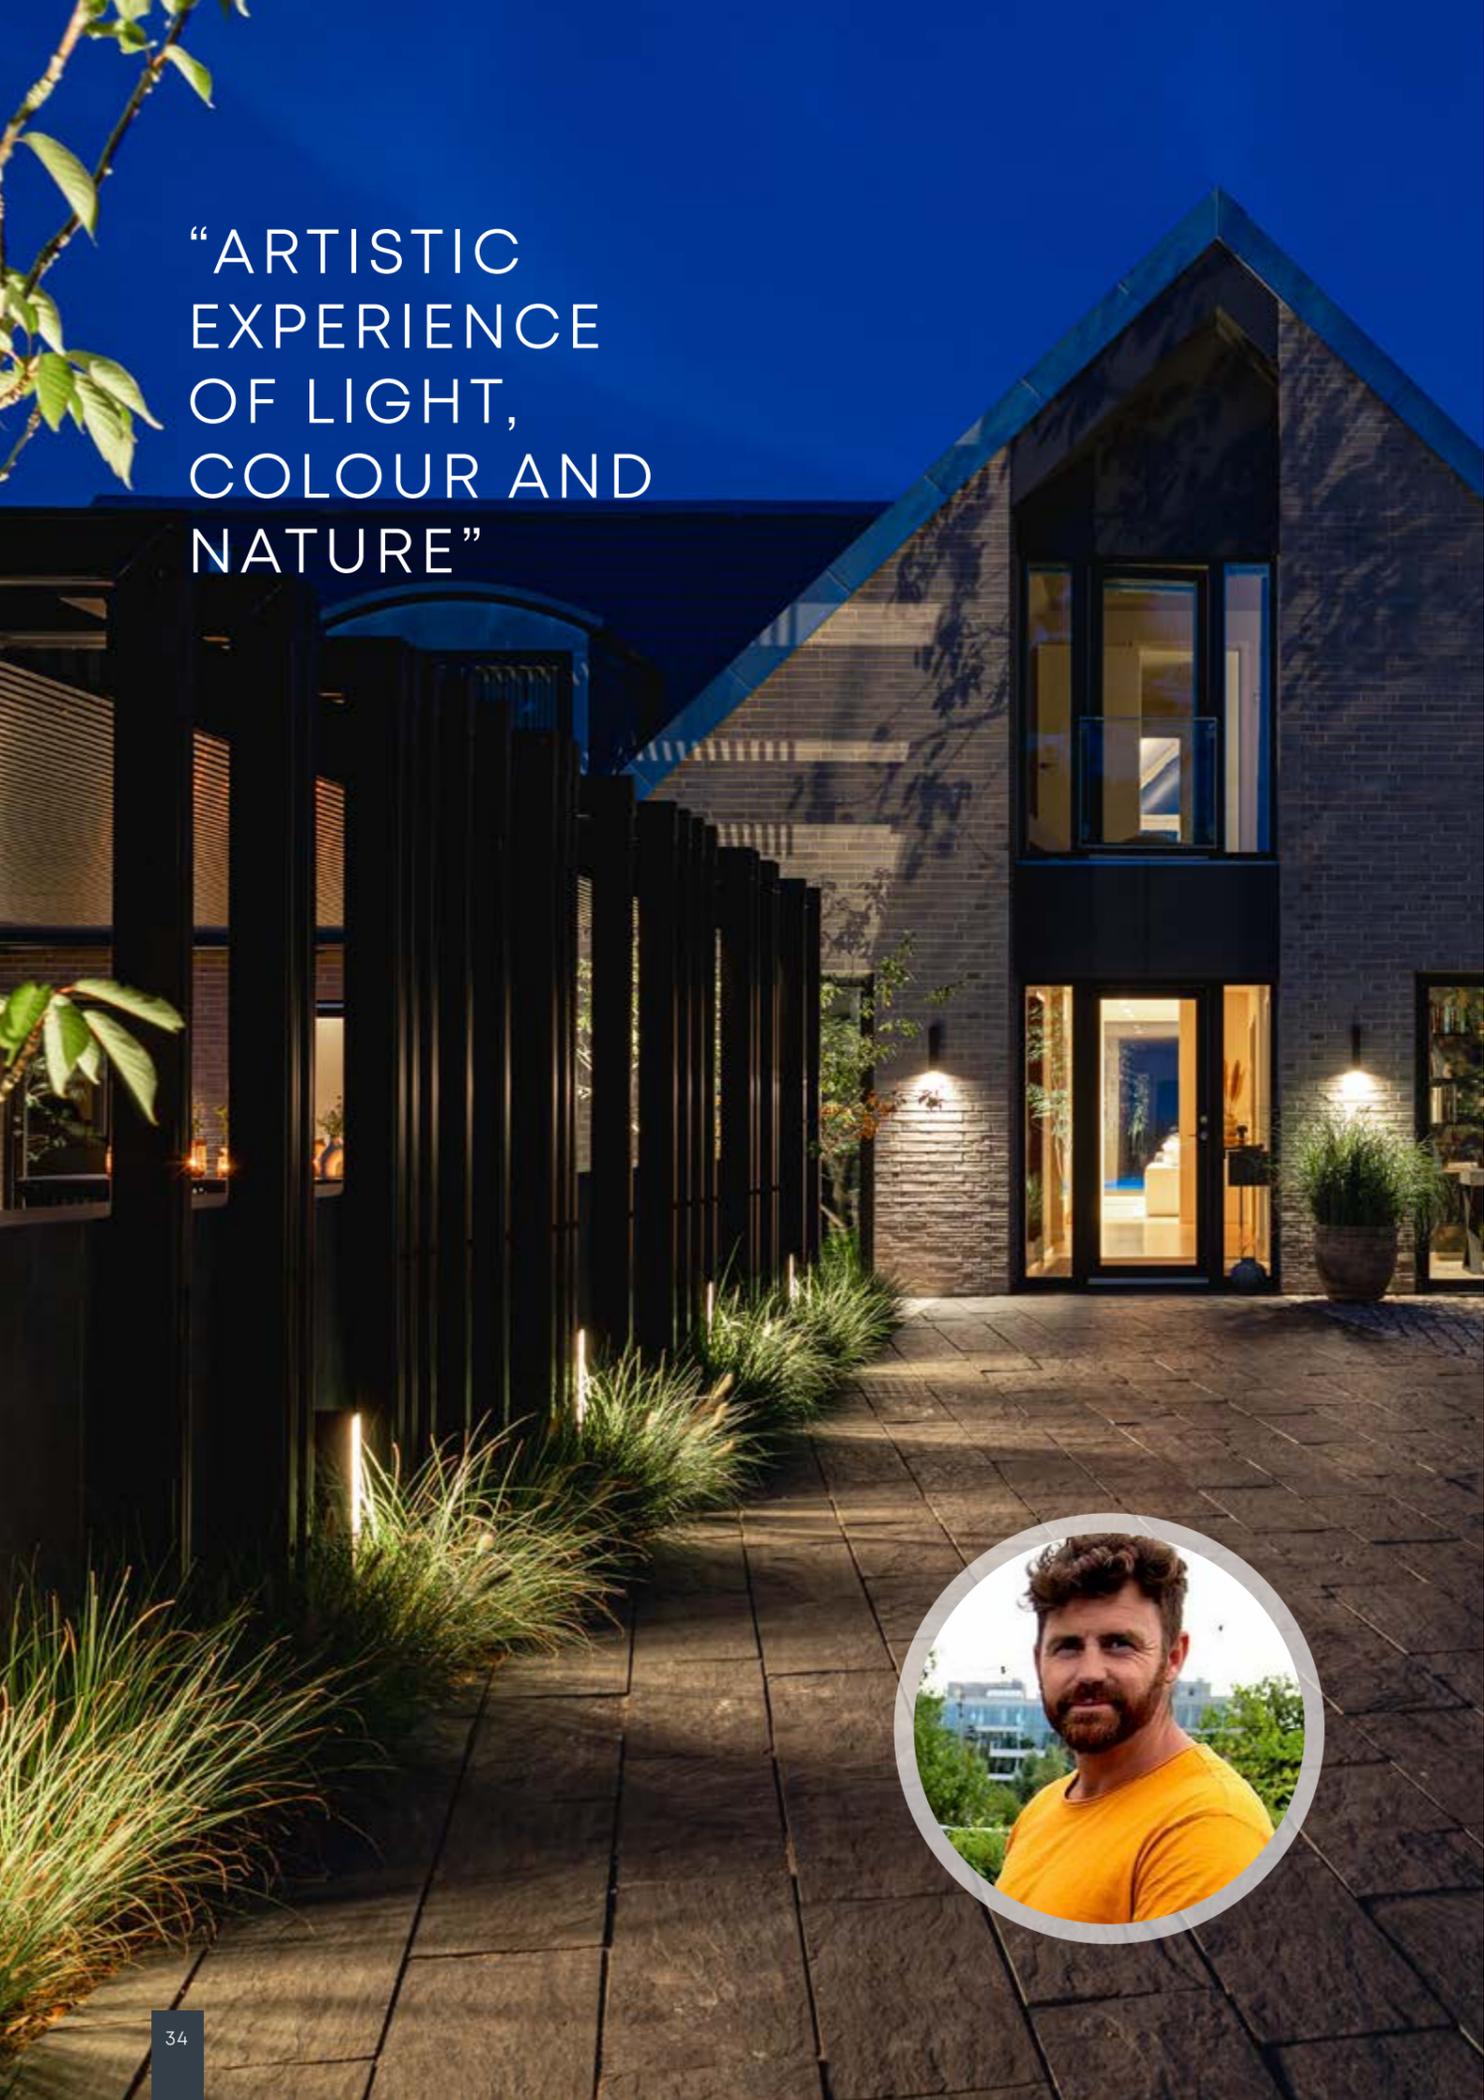

Biesot used the ACE concept in a garden in a village in Noord-Holland. The fixtures were alternated with lots of 'invisible' fixtures, like the SCOPE. "These are perfect for illuminating certain elements at night, but blend into the background during the day. I also think the light emitted by the EVO FLEX is perfect for emphasising specific lines in the garden along, for example, paths and plants."

Bart does not believe that lighting needs to always be conspicuously visible. "We put duckboards here that lead from the house to the swimming pool. I wanted to accentuate these wooden elements without the lighting drawing too much attention. So, our team installed ACE fixtures along the path. They give the path a wonderful glow after dark."

"IT CREATES AN AMAZING AMBIENCE"

CHRISTIAN KIELBERG

IN-LITE FITS IN PERFECTLY

Countries like Sweden and Denmark offer the perfect natural conditions for luxury outdoor lighting. The long, dark nights – due to the northern geographical location – really bring out the most in lighting elements. Christian Kielberg knows this like no other. To create more ambience during the long Scandinavian nights, this Danish designer often chooses an in-lite lighting plan.

The enthusiastic Kielberg heads large-scale projects carried out by the company ConceptGardens. Their ultramodern, sleek homes and gardens really appeal to the imagination. “In Scandinavia, we primarily view light as something practical. But in-lite fixtures let me show my clients that lighting is not only functional, but can also be stunningly beautiful. The in-lite concepts give the outdoor space an extra dimension.”

EVO

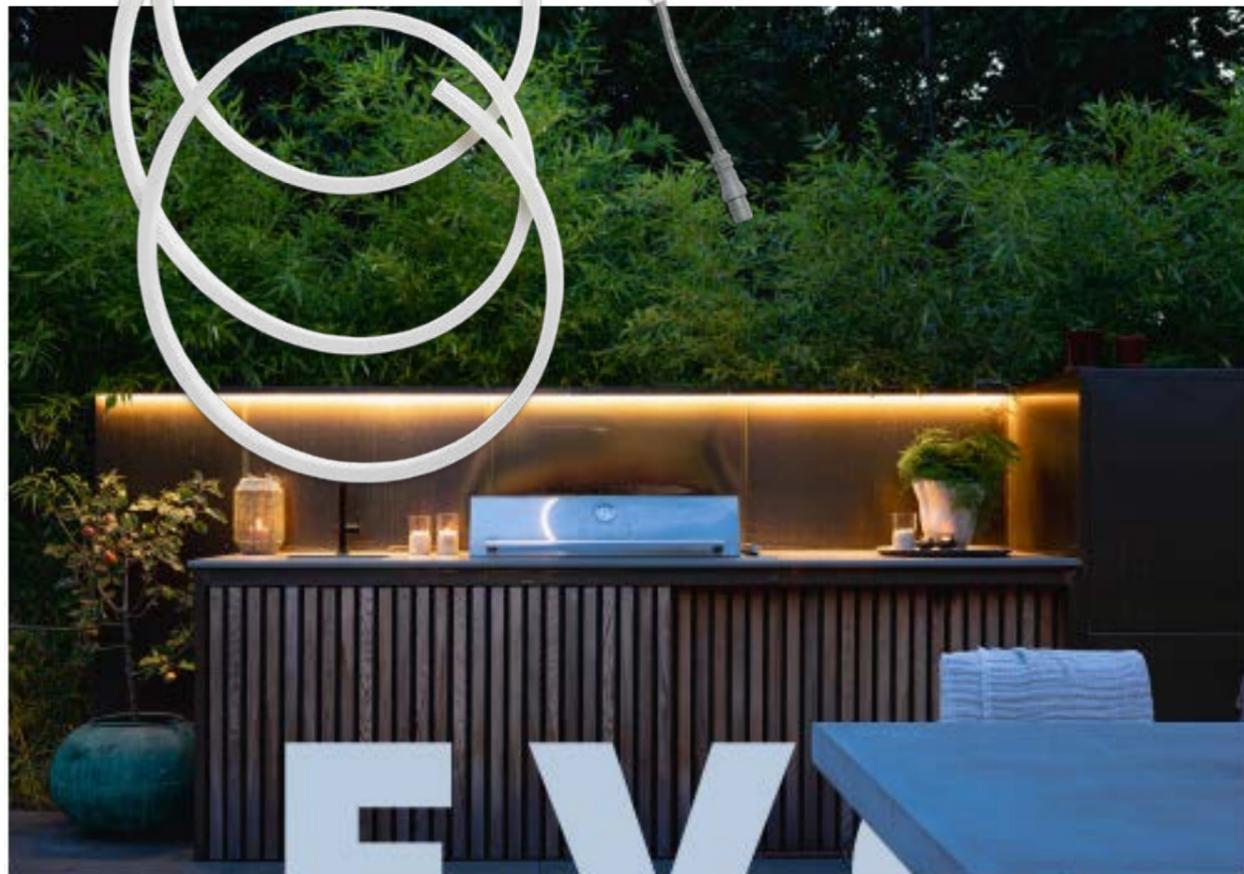

EVO LOW

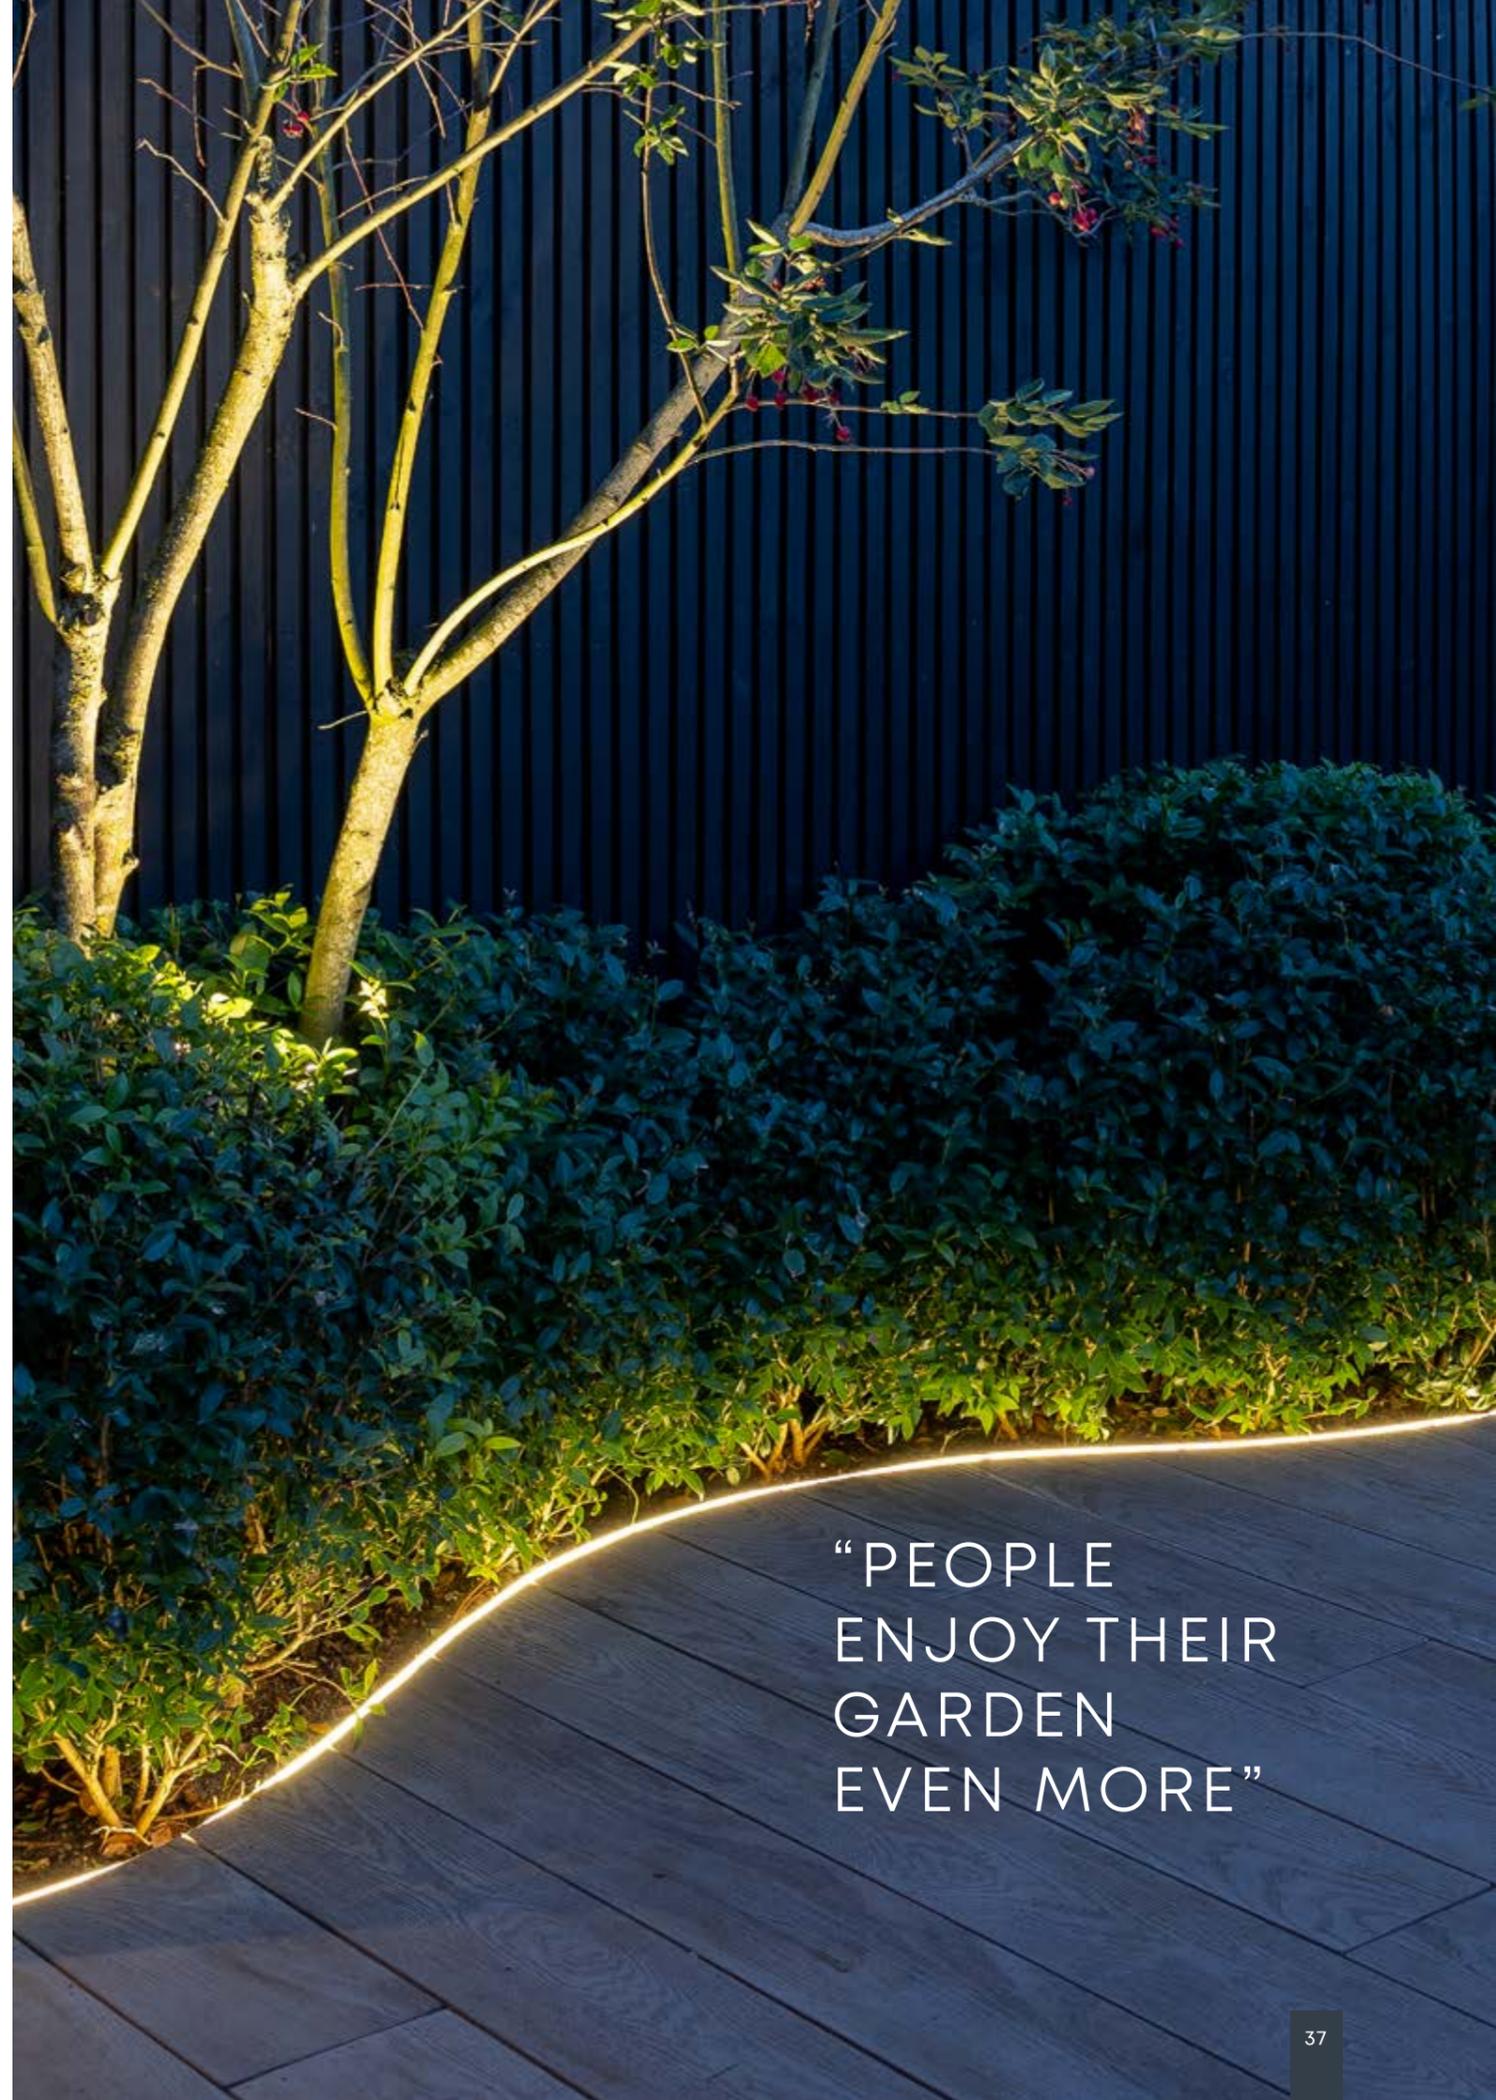

Christian describes the eye-catching project Bamboo Lounge in the Gentofte district of Copenhagen. "The windows of this house have the exact same shape and black colour as the EVO fixtures from in-lite. As if they were made especially for this home.

I also used this concept to illuminate the steps of the wide, sloping path. When I used EVO for the first time, the effect immediately had an emotional impact on me. Everything simply fit together perfectly. A warm, inviting ambience combined with the Chinese bamboo gives the garden a genuinely unique character."

GARDEN
EVEN MORE”

**DISC
PENDANT**

FUNCTION MEETS DESIGN

DISC PENDANT

Design is more important with some products than with others. These products, for example, are used to illuminate dinner tables, lounge areas and overhangs, places where the lighting fixture is matched to attractive furniture and accessories.

The DISC PENDANT is one such fixture. This hanging light turns any overhang, lounge corner or eating area into an attractive setting that invites lingering. The BASE accessory makes it possible to easily hang every DISC PENDANT at a different height for a playful effect.

OUR ICONS

FUNCTION MEETS

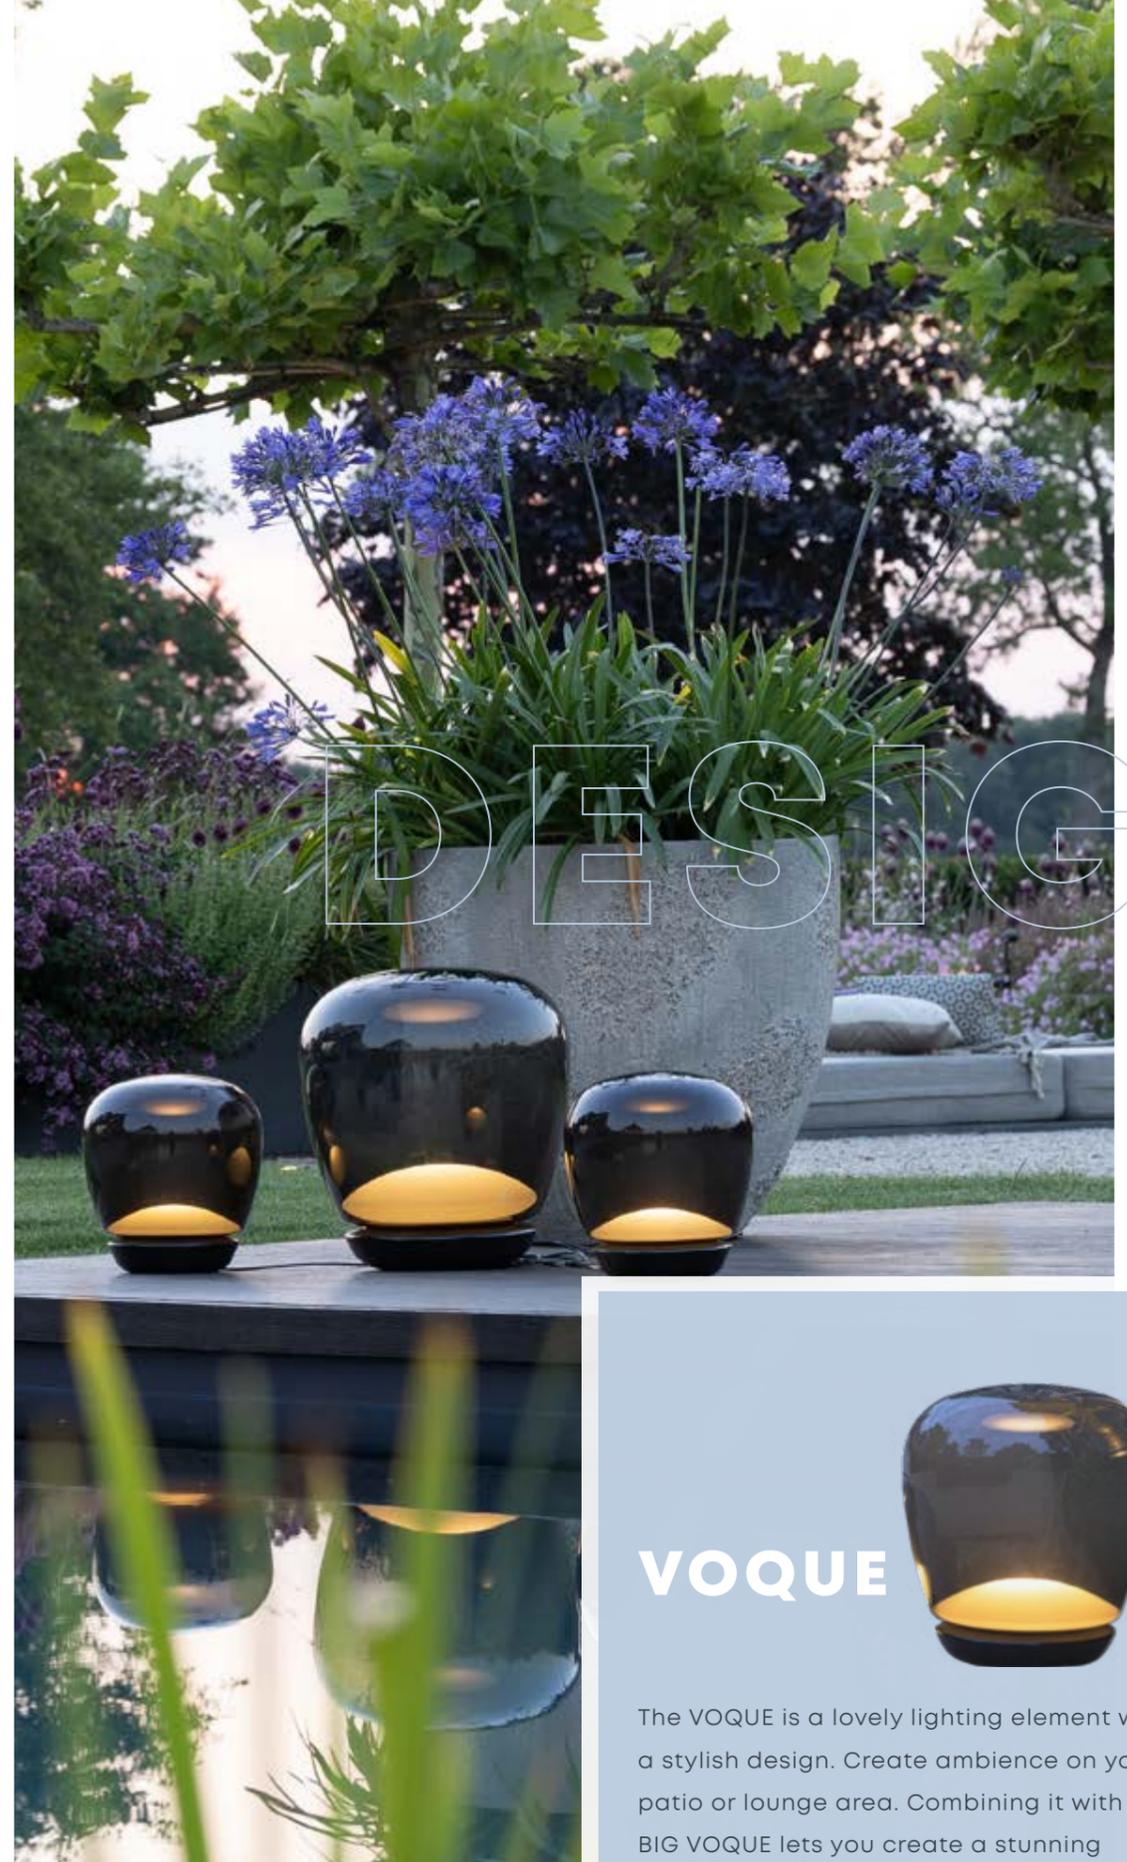

SWAY TABLE

You can literally illuminate any spot with this table light, from an indoor sunroom to a garden sitting or lounge area. The perfect ambience can be created by adjusting the light with Human Dimming.

DESIGN

VOQUE

The VOQUE is a lovely lighting element with a stylish design. Create ambience on your patio or lounge area. Combining it with the BIG VOQUE lets you create a stunning eye-catcher for your outdoor area.

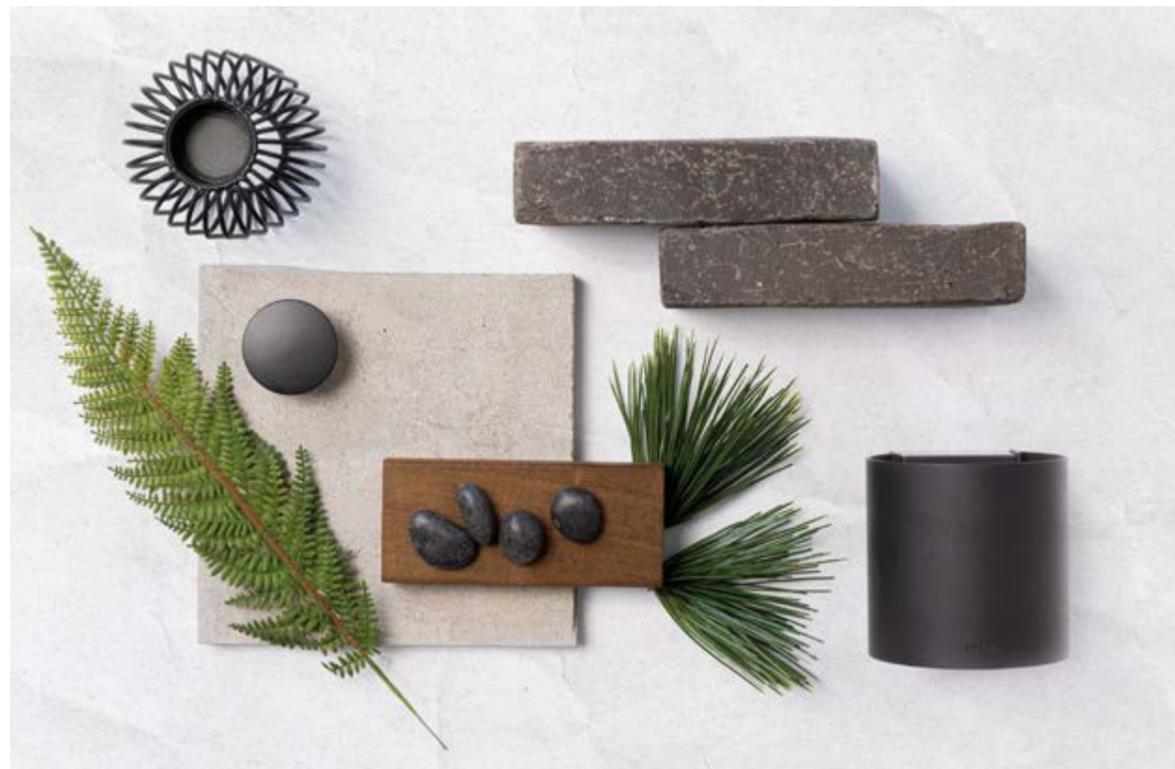

PERFECT

MOOD

MOOD BOARD

IN PERFECT HARMONY

What does your dream garden look like? Does it have a modern look? Classic? Bohemian? Or perhaps industrial or Japandi? The different colours of the in-lite fixtures are tailored to these styles. Read all about it here in the blogs on our website and be inspired to choose the fixtures and colours that are perfect for your outdoor space.

LIGHT JUST GOT SMARTER

SMART OUTDOOR LIGHTING FOR ANY GARDEN

Smart outdoor lighting from in-lite lets you determine the ambience of your garden. Not only do the smart fixtures produce the familiar warm white light from in-lite, but you now also have the possibility to set the lighting to any desired colour. This lets you add a personal dimension to your outdoor space. And smart lighting from in-lite is also dimmable. You easily control your outdoor lighting using the in-lite app on your smartphone or tablet.

Apart from ambience and user-friendliness, smart outdoor lighting also adds safety to your outdoor space. By making the light brighter in dark areas, steps are more easily visible and the light switches on automatically when someone is nearby.

SMART

ART

TRANSFORMER

SMART HUB

The SMART HUB and in-lite app give you the freedom to personalise your outdoor lighting and control it individually. The in-lite app was developed for iOS and Android systems, so you can easily download it from the Apple App Store or Google Play. To control the in-lite smart products with the app, you need to install the SMART HUB-150.

SMART SCOPE TONE

The SMART SCOPE TONE gives you the freedom to create your own unique ambience in your garden. In addition to the familiar warm white light from in-lite, this LED spotlight lets you set the lighting to any desired colour and give your outdoor space a personal dimension. The SMART SCOPE TONE has a reach of up to five metres, so that it can also be used for tall walls and large objects in your garden.

SMART PRODUCTS

SMART

SMART BRIDGE

The SMART BRIDGE lets you link your smart outdoor lighting to your smart home system, such as Amazon Alexa, Google Home or Apple HomeKit.

This lets you combine all of your smart devices, both inside and outside, in a single system. It also offers you the possibility to operate your outdoor lighting remotely and, if desired, switch it on and off with voice commands.

THE PERFECT FINISHING TOUCH

SMART MOVE

The wireless motion detector SMART MOVE switches on your outdoor lighting automatically when you walk or drive past it. This provides both convenience and safety when arriving home after dark. In addition, automatic lighting has a deterrent effect on unwanted guests.

SMART EVO FLEX TONE

The SMART EVO FLEX TONE is a flexible LED strip that produces perfectly even line lighting without any visible light points. The in-lite iOS or Android app can be used to dim the light emitted by the SMART EVO FLEX TONE and change it to any colour desired, including the familiar warm white in-lite light.

LIGHTING PLAN

IN FOUR STEPS

Want to use in-lite lighting in your yard, but not sure exactly where to begin? The steps below help you create a stunning lighting plan in no time.

1

GARDEN DESIGN

Your perfectly illuminated garden starts with a lighting plan. Interesting elements to illuminate are a patio, trees and plants, gazebo or table. Not quite up to the job? Have an in-lite dealer or landscaper help you out.

2

ACCENTS

A good lighting plan is all about the accents. So, make sure to first think long and hard about which elements of your garden you would like to be visible at night, such as the path to the door or the patio.

3

TYPE OF LIGHT

For every element to be illuminated, determine the type of lighting required. This can be done using the product advisor at in-lite.nl.

Alternate wide, bright lighting with subtle lighting. This produces an attractive lighting effect that enlarges the living environment of your garden and home.

4

FIXTURES

The final step is to simply choose the right fixtures. Fixtures are available for a wide range of purposes and in various colours. Need inspiration? Have a look at our website for the best ways to use our fixtures.

THE IN-LITE SYSTEM

HUB - 50

A high-quality transformer with touch screen operation and maximum installation value of 50 VA, equipped with two lines that can be controlled jointly.

HUB - 100

A high-quality transformer with touch screen operation and maximum installation value of 100 VA, equipped with two lines that can be controlled jointly.

SMART HUB - 150

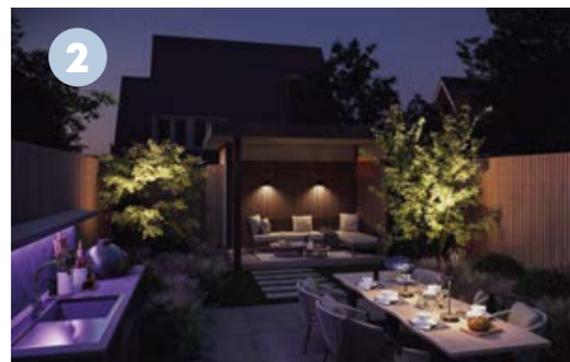

The SMART HUB-150 has a total installation value of 150 VA. This transformer can control the three cables separately using a Bluetooth Low Energy connection and the in-lite app.

GARDEN CREATION

IN PHASES

YOUR DREAM GARDEN

The unique in-lite system makes it possible to expand your lighting step by step. You start by installing a sufficient number of cables in the garden and over time, you simply add new fixtures as desired. Your dream garden will be a reality in no time!

EXPERIENCE IN-LITE

AT OUR DEALERS

There is no better place to experience in-lite than at our dealers. Once you have explored one of the in-lite channels and are ready to see our lighting in real life, simply go to the store locator on the in-lite website

and find the dealer closest to you. At the in-lite Experience Shop, you can even see the light in the evening garden, making it even easier to create your perfect lighting plan.

A BRAND WITH A MISSION

in-lite is more than just an outdoor lighting brand. We're a company with a mission. Every day, our team of or around 50 enthusiastic professionals devotes time and effort to making outdoor spaces exceptional. This is done by developing beautiful outdoor lighting fixtures but above all, by inspiring as many people as possible and showing that lighting belongs in every outdoor space.

But that's not all we do. A select network of partners and landscapers have the exact same mission. We train these professionals in our show garden and inspire them with unique ways to use lighting. Together we then make any outdoor space a unique place to enjoy the evening hours to the fullest.
